Forage Hiring Team

Dear Forage Hiring Team,

As a soon-to-be new graduate, I'm looking for a role where the code I write has a clear and positive impact. Forage's mission to help families access food really stood out to me, and it's the kind of meaningful work I want to be a part of. I'm writing to apply for your software engineering position for recent graduates.

My computer science degree and work experiences have given me a solid foundation in software development. While I have experience across the stack with Python, I've recently spiked my focus on frontend work with TypeScript. A good example of this is the full-stack AI dashboard I designed and built at iFrog, which provides real-time customer segmentation and lead scoring to over 60 car dealerships.

What excites me about a startup environment is the chance to take ownership and see a feature through from the first line of code to launch. I'm eager to join a small, focused team where I can learn from others through things like code reviews and contribute to building reliable, user-friendly systems.

The opportunity to grow as an engineer while contributing to a mission as important as yours is exactly what I'm looking for. I'd be happy to talk more about my background and how I could help your team. Thank you for your time.

Best,

Shree Gopalakrishnan
