Coinbase Hiring Team

Dear Coinbase Hiring Team,

I was incredibly inspired reading about your mission to increase economic freedom in the world. I'm not just looking for another software engineering role; I'm looking to be part of a team that is tackling massive, meaningful problems. Your description of an intense, high-caliber culture where engineers run toward the hardest challenges is exactly the type of environment where I believe I can do my best work.

I have a deep passion for building scalable, production-ready systems that solve real-world problems. As a Full Stack Engineer at iFrog, I architected a data pipeline to process over 200,000 records and built a full-stack AI platform from the ground up. This experience in designing and scaling services with tools like PostgreSQL and Docker aligns directly with what you're looking for. More importantly, that project's success was measured by its impact on business growth—a 15% increase in sales conversion—which is the kind of results-driven work I know is central to your Growth organization.

Your desire for engineers who can take a product from 0 to 1 resonates strongly with my background. I have a track record of taking products from idea to production, including an award-winning IoT system I developed from concept to a working MVP. I thrive on the challenge of bridging the gap between a technical vision and a tangible product that helps people, and I am eager to apply that same energy to building the future of the onchain platform.

I am passionate about building an open financial system and believe my skills in backend engineering can directly contribute to your mission. The opportunity to learn from and contribute to such a talented team would be a privilege. Thank you for your time and consideration.

Sincerely,

Shree Gopalakrishnan
